

MediFlow AI Autonomous AI Healthcare Coordination Platform

"From symptoms to specialist — intelligently coordinated by AI."

Mandeep Singh Pruthi IIITD'27

The Problem

Healthcare systems today are fragmented and difficult to navigate. Existing platforms lack intelligent coordination and seamless patient-doctor interaction.

Patients Struggle With

- Identifying the correct specialist
- Booking appointments quickly
- Understanding prescriptions
- Managing follow-ups
- Accessing personalized guidance

Doctors Face

- Scattered patient information
- Repetitive patient queries
- Inefficient appointment handling

Our Solution — MediFlow AI

MediFlow AI is an AI-powered healthcare coordination platform with a **Patient Interface**, **Doctor Interface**, and **Autonomous Multi-Agent Workflow**.

Dynamic Symptom Understanding

Dynamically understands patient symptoms and routes users to the correct specialist.

Smart Appointment Scheduling

Schedules appointments and enables doctor-patient coordination.

AI Prescription Explanation

Explains prescriptions using AI and provides intelligent follow-up support.

What Makes MediFlow AI Unique?

Unlike traditional healthcare apps, MediFlow AI uses **multiple AI agents that collaborate autonomously**. AI does not replace doctors — it intelligently coordinates the healthcare journey.

Symptom Analysis Agent

Specialist Routing Agent

Appointment Scheduling Agent

Prescription Explanation Agent

Follow-Up Assistance Agent

Patient & Doctor Interface Workflow

Patient Interface

- **Conversational AI Intake** — Adaptive questions via text, options, or voice
- **Specialist Recommendation** — AI analyzes symptoms and recommends the right specialist
- **Appointment Booking** — Select nearby doctor, slot, and consultation method
- **Prescription & Follow-Up** — View prescriptions, understand medicines via AI, ask follow-up questions

Doctor Interface

- **Appointment Dashboard** — Manage appointments, update consultation status, track schedules
- **Patient Overview** — View symptoms, AI-generated summaries, and consultation details
- **Prescription Upload** — Upload medicines, dosage instructions, and treatment notes accessible to the patient AI assistant

Multi-Agent System Architecture

MediFlow AI's architecture features **autonomous agent communication, adaptive questioning, intelligent routing,** and **contextual healthcare assistance** — from patient input through follow-up.

Execution & Implementation Plan

Phase 1 — Frontend

Patient dashboard, doctor dashboard,
conversational AI interface

1

2

3

4

Phase 2 — AI Workflow

Symptom analysis flow, specialist
recommendation, prescription explanation
AI

Phase 3 — Backend

Appointment management, patient-doctor
workflow, prescription storage system

Phase 4 — Demo

Real-time AI interactions, end-to-end
workflow demonstration

Technology Stack & Future Scope

Tech Stack

- **Frontend:** React.js, Tailwind CSS, Framer Motion
- **Backend:** Node.js / FastAPI
- **AI APIs:** Gemini / OpenAI
- **Database:** Firebase / Supabase

Future Scope

- Voice-based AI healthcare assistant
- OCR prescription scanning
- Multilingual support
- Emergency prioritization system
- Wearable device integration

Conclusion

MediFlow AI combines **autonomous AI agents**, **intelligent healthcare workflows**, **patient-doctor coordination**, and **real-time AI assistance** into one unified healthcare ecosystem.

Dual-Interface Platform

Multi-Agent AI Architecture

Smart Healthcare Coordination

Practical Real-World Application

"Making healthcare smarter, simpler, and more accessible through autonomous AI systems."
